3.3: collaboration and health services

3.3.4: Does your university as a body provide students access to sexual and reproductive health-care services including information and education services?

We have given a great deal of attention to the care of pregnant students and staff members through scheduled meetings, giving advice and consultancy at our nursing department. Also, we have conducted some [awareness campaigns](#) that are related to the health of both child and mother at the pregnancy period. Moreover, we are keen on organising [series of seminars](#) and workshops to spread the knowledge of sexual health and reproductivity.
