6.5.1: Does your university as a body provide educational opportunities for local communities to learn about good water management?

Yes.

Good water management is a well talked about theme but never discussed in a scientific convincing way. Our staff at MUC gave numerous public lectures that dealt with the issues of water management and how to tackle them in a scientific and easy way for anyone to comprehend. These scientific public lectures are as follows:

- Groundwater pollution causes and treatment ([link](#))
- Wastewater treatment workshop ([link](#))
- A scientific workshop entitled “Removal heavy metals from groundwater using solid agricultural waste ([link](#)).
