is the sequence of partial sums of the series and the number Sn being the 19th partial sum.

If the sequence of partial sum Sn converges to a limiting value (L), then the series is convergent and its sum is (L). Hence,

altartagtagtagther of the series does not converge, then the series divergent and there is no sum.

* Any Series can be expressed by:

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \sim_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \sim_{n=1}^{\infty} \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \sim_{n=1}^{\infty} \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right) \sim_{n=1}^{\infty} \sim_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \alpha_n \right)

\[
\sum_{n=1}^{\infty} \alpha_n \left(\sum_{n=1}^{\infty} \right) \sim_{n=1}^{\infty} \s

The following examples shows how the "partial fraction feethingue" can be used to compate the sums for some scries. When this sum can be done then the series is convergent.

Ext Determine whether the following sories is convergent or $no? 0 \ge \frac{2}{n(n+1)}$ Sold $\ge \frac{2}{n(n+1)} = \frac{A}{n} + \frac{B}{n+1} \Rightarrow A(n+1) + Bn = 2 \Rightarrow \frac{1}{n(n+1)} = \frac{2}{n(n+1)} \Rightarrow A(n+1) + Bn = 2 \Rightarrow \frac{1}{n(n+1)} = \frac{2}{n(n+1)} \Rightarrow A(n+1) + Bn = 2 \Rightarrow \frac{1}{n(n+1)} = \frac{2}{n(n+1)} \Rightarrow A(n+1) + Bn = 2 \Rightarrow \frac{1}{n(n+1)} = \frac{2}{n(n+1)} \Rightarrow A(n+1) + Bn = 2 \Rightarrow \frac{1}{n(n+1)} = \frac{2}{n(n+1)} \Rightarrow A(n+1) + A(n+1) + Bn = 2 \Rightarrow \frac{1}{n(n+1)} = \frac{2}{n(n+1)} \Rightarrow A(n+1) + A(n+1$

EX) Discuss the convergence of this series =
$$\frac{Z}{(4n-3)(4n+1)}$$
?

Soli) $\frac{4}{(4n-3)(4n+1)} = \frac{A}{4n-3} + \frac{B}{4n+1} \implies A(4n+1) + B(4n-3) = 4$

if $n = \frac{3}{4} \implies A = 1$ and if $n = -\frac{1}{4} \implies B = -1 \implies B = -1$

$$\sum_{(4n-3)(4n+1)} = \sum_{(4n-3)(4n+1)} \left(\frac{1}{4n-3} - \frac{1}{4n+1}\right)$$
 $S_n = (1-\frac{1}{4n+1}) + (\frac{1}{4} - \frac{1}{43}) + (\frac{1}{4n-3} - \frac{1}{4n+1})$
 $= 1 - \frac{1}{4n+1} \implies \lim_{n \to \infty} S_n = \lim_{n \to \infty} (1 - \frac{1}{4n+1}) = 1 \implies 6$

the series is convergent
