search engines

They are huge databases with addresses and websites, through which a specific topic can be searched for in any of the different fields on the network on a permanent basis. They work automatically and sort and index a huge amount of pages

Some of the most popular search engines:

1. (Google): Google is the most famous search engine in the world. It is characterized by the ability to provide accurate and comprehensive search results, in addition to other services such as email and data storage.
2. Bing: Bing is another search engine that is distinguished by providing diverse and detailed search results, in addition to services such as maps and translation.
3. Yahoo: Yahoo was a famous search engine, but it has now turned into a search engine powered by Google. It provides accurate search results and features many additional services.
4. Yandex: Yandex is a Russian search engine that is distinguished by providing specialized
