

Solved Problems Set#1

Q1. Consider the switching networks shown in Figure below. Let A_1 , A_2 , and A_3 denote the events that the switches s_1 , s_2 , and s_3 are closed, respectively. Let A_{ab} denote the event that there is a closed path between terminals a and b . Express A_{ab} in terms of A_1 , A_2 , and A_3 for each of the networks shown

(a)	$A_{ab} = A_1 \cap A_2 \cap A_3$	(c)	$A_{ab} = A_1 \cap (A_2 \cup A_3)$
(b)	$A_{ab} = A_1 \cup A_2 \cup A_3$	(d)	$A_{ab} = (A_1 \cap A_2) \cup A_3$

Q2. Identify the shaded set:

(a) Shaded region: $B \cup C$

(b) Shaded region: $A \cap (B \cup C)$

(c) Shaded region: $A \cap B$

(d) Shaded region: $A \cap C$

(e) Shaded region: $(A \cap B) \cup (A \cap C)$

Q3. Prove :

(a) $P(A | B) \geq 0$

(b) $P(S | B) = 1$

(c) $P(A_1 \cup A_2 | B) = P(A_1 | B) + P(A_2 | B)$ if $A_1 \cap A_2 = \emptyset$

Solution:

(a)	$P(A B) = \frac{P(A \cap B)}{P(B)} \quad P(B) > 0$ <p>∴, $P(A \cap B) \geq 0$. Thus,</p> $P(A B) \geq 0$	(c)	$P(A_1 \cup A_2 B) = \frac{P[(A_1 \cup A_2) \cap B]}{P(B)}$ $(A_1 \cup A_2) \cap B = (A_1 \cap B) \cup (A_2 \cap B)$ $(A_1 \cap B) \cap (A_2 \cap B) = \emptyset$ $P(A_1 \cup A_2 B) = \frac{P(A_1 \cap B) + P(A_2 \cap B)}{P(B)} = \frac{P(A_1 \cap B)}{P(B)} + \frac{P(A_2 \cap B)}{P(B)}$ $= P(A_1 B) + P(A_2 B) \quad \text{if } A_1 \cap A_2 = \emptyset$
(b)	<p>$S \cap B = B$. Then</p> $P(S B) = \frac{P(S \cap B)}{P(B)} = \frac{P(B)}{P(B)} = 1$		

Q3. Prove

$$P(\bar{A}|B) = 1 - P(A|B)$$

Solution:

$$A \cup \bar{A} = S, \quad A \cap \bar{A} = \emptyset$$

$$P(A \cup \bar{A}|B) = P(S|B) = 1 = P(A|B) + P(\bar{A}|B)$$

$$P(\bar{A}|B) = 1 - P(A|B)$$

Q4. You toss a fair coin three times:

- a. What is the probability of three heads, HHH?
- b. What is the probability that you observe exactly one head?
- c. Given that you have observed at least one head?

Solution:

- a. Since each toss is independent of other then

$$P(HHH)=P(H).P(H).P(H)=(0.5)^3=0.125$$

Or by using binomial distribution or repeated trials: $n=3$, $k=0,1,2,3$, since we have 3 Heads then $k=3$ with $P_s = P(H)=0.5$, $P_f=1-P_s=0.5$

$$P(HHH) = P_3 = C_k^n P_s^k P_f^{n-k} = C_3^3 (0.5)^3 (0.5)^0 = 0.125$$

b. Using binomial distribution or repeated trials: $n=3$, $k=0,1,2,3$, since we have one Head then $k=1$ with $P_s = P(H)=0.5$, $P_f=1-P_s=0.5$

$$P(H) = P_1 = C_k^n P_s^k P_f^{n-k} = C_1^3 (0.5)^1 (0.5)^2 = \frac{3!}{1!.2!} (0.5)^3 = 0.375$$

c. Using binomial distribution or repeated trials: $n=3$, $k=0,1,2,3$, since we have at least one Head then $k=1,2,3$ with $P_s = P(H)=0.5$, $P_f=1-P_s=0.5$

$$\begin{aligned} P(\text{at least 1 Head}) &= P_{1\text{or}2\text{or}3} = \sum_{k=1}^3 C_k^n P_s^k P_f^{n-k} = \sum_{k=1}^3 C_k^3 P_s^k P_f^{3-k} \\ &= C_1^3 (0.5)^1 (0.5)^2 + C_2^3 (0.5)^2 (0.5)^1 + C_3^3 (0.5)^3 (0.5)^0 = 0.875 \end{aligned}$$
