

Lab 2: Taxonomy

- Classification of organisms (Taxonomy) is science to classify organisms in categories.

The categories of classification of organisms are :

-Domain

-Kingdom

-Phylum

-Order

-Family

-Genus

-Species

- Taxonomy derived from Taxonomy arranged and named means ordered or name or list.
- Taxonomy: is the science of classification of organisms derived from Greek (Latin) words Taxo and nomy.
- Carolus Linnaeus is a Swedish botanist (1707-1757) developed a method of grouping organisms that is still used by scientists today.

- He was found the binomial nomenclature or scientific name for each organism
